

## Maternal Opioid Treatment: Human Experimental Research (MOTHER)

The Maternal Opioid Treatment: Human Experimental Research (MOTHER) Project is an international multi-site clinical trial comprised of eight research grants—six in the United States and one each in Canada and Austria—to evaluate the efficacy of buprenorphine as a pharmacotherapy for pregnant opioid dependent women. Multiple sites provide the necessary number of patients to test this new therapy.

### Mission:

To assess in opioid-dependent pregnant women the efficacy of buprenorphine for improving birth outcomes and reducing neonatal abstinence syndrome (NAS) relative to methadone

Obtain abstracts of grants and contact information.

### Locations:

Maternal Opioid Treatment: Human  
Experimental Research  
Johns Hopkins University  
Dept. of Psychiatry & Behavioral Sciences  
4940 Eastern Avenue, D-3 East  
Baltimore, MD 21224  
Hendree Jones, Ph.D.  
hejones@jhmi.edu

Coordinating Center  
University of Maryland  
Center for Substance Research (CESAR)  
4321 Hartwick Road, Suite 501  
College Park, MD 20740  
Amelia Arria, Ph.D.
